

Structural Insulated Panel Supplier Expanding "SIP" Manufacturing Technologies

SIP Supply, LLC acquires structural insulated panel manufacturer to become the nation's most technologically advanced "SIP" producer.

Eastman, GA (PRWEB) July 9, 2007 -- SIP Supply, LLC, a leading supplier of structural insulated panels for the construction of energy efficient residential and commercial projects, recently acquired Insulated Component Structures, Inc, a producer of structural insulated panels and panel components and holder of the patented corner system, which is three times stronger than any other on the market.

"We were very fortunate to have the opportunity to purchase ICS," states Mr. Simpson, SIP Supply's forward-thinking CEO, "They had developed and tested the ICS product line extensively resulting in a premium SIP product, which fit our business model for quality product."

ICS's former CEO, Mr. Andrew Hansen, has remained available as a consultant for further technology integration for the company, while continuing to manufacture at his plant in North Carolina.

The SIP product line developed by SIP Supply, LLC has enabled Americans to own homes and businesses that cost half as much to heat and cool and at the same time, live and work in structures that provide safety and protection from elements which were, in the past, formidable.

Roy D. Mullins, SIP builder and CEO of Energy Efficient Panel Homes, LLC says, "When you have a building that can save you 50% on your heating and cooling and withstand winds up to 200 mph, it's a no-brainer."

With the acquisition of ICS, SIP Supply, LLC has positioned themselves to become the most progressive structural insulated panel producers in the Nation. SIP Supply's unique polyurethane panels combined with ICS's patented corner system and technologies make SIP Supply the most industrially superior manufacturer of panel products.

SIP Supply, LLC provides architects, engineers and building developers with structural insulated panels that deliver premium thermal efficiency, structural integrity and design flexibility. SIP Supply selectively manufactures Polyurethane (PUR) Insulated Panels. SIP Supply's patented one-piece corner system and polyurethane core quality suggests that by comparison, they have a superior product in their industry sector. They specialize in fulfilling large volume orders from their high production plants in California and Georgia, yet they remain price competitive for single dwelling projects.

Insulated Component Structures, Inc. (ICS) is a manufacturing company dedicated to developing cost effective, high quality, energy efficient, easy to assemble, building components as alternatives to conventional building methods. ICS also grants factory licenses in the United States and currently has independent licensed factories operating in Florida, Colorado, North Carolina, Louisiana and Maine.
