

Earn AIA Learning Credits with New SIPs Online Course

Company dedicated to educating industry on Structural Insulated Panels, launches new AIA-accredited Continuing Education course on "SIP"s

Eastman, GA January 31, 2008 --- SIP Supply, LLC leading developer and supplier of polyurethane structural insulated panels in conjunction with AEC Daily the premier online continuing education provider has launches "*The Features, Benefits & Applications of Structural Insulated Panels (SIPs).*"

This online continuing education course serves the architectural, engineering and construction segments. Featuring 105 pages, includes demonstrations how SIPs are used in building projects, how SIPs earn points for LEEDs, Energy Star and green affordable housing programs, features product comparisons and provides a highly informative case study submitted by RES Consulting and Anderson & Anderson Architects and Construction.

Typically, an industry professional can register for a course, review it online or download it for later study prior to taking the test for continuing education credits. Users benefit by downloading the continuing education SIP course and it then becomes a reference guide for future use at any time on the user's computer in a PDF format or printed to a booklet, before and after the testing period.

SIP Supply signed on to develop the Course in 2005 realizing the need for a true educational program for the Panel Industry. "This wasn't just a sponsorship opportunity for us, we could have done that somewhere else in 5 pages of sales pitch," said Darrell Simpson, founder and CEO of SIP Supply. "We needed to shorten the learning curve for professionals who want to explore the use of SIPs. Anyone should have easy access to this data, walk away with a new understanding of this versatile building product and feel confident in specifying SIPs in their projects." Mr. Simpson will also be offering the course as a live seminar in major cities Nationwide for 2008.

Professionals seeking to earn continuing education credits online and learn more about Structural Insulated Panels can find the free course at <http://www.aecdaily.com/sponsor/sipsupply> Non professionals interested in learning more about SIPs may download the free course at <http://www.PolyurethanePanels.com>

About SIP Supply, LLC – SIP Supply provides their ICC tested polyurethane core Greenix™ brand structural insulated panels that deliver the highest quality, thermal efficiency, structural integrity and value engineering. SIP Supply specializes in fulfilling large volume orders through the industry leading high production plants in California and Georgia, yet they remain price competitive for single dwelling projects. In addition to their high production facilities, SIP Supply's ICS-brand independent licensed factories serve Florida, Colorado and North Carolina with additional areas open for expansion.

About AEC Daily – AEC Daily publishes an online educational resource that provides a great variety of quality education, at no cost to the participant, in all areas of the Architectural, Engineering, and Construction industry. With over 174 courses available, and many more in production, AEC Daily is the leader in educational programs and strategies for the A.E.C. Industry.
